COLORBOOK**

Finish coloring the pendulum :)

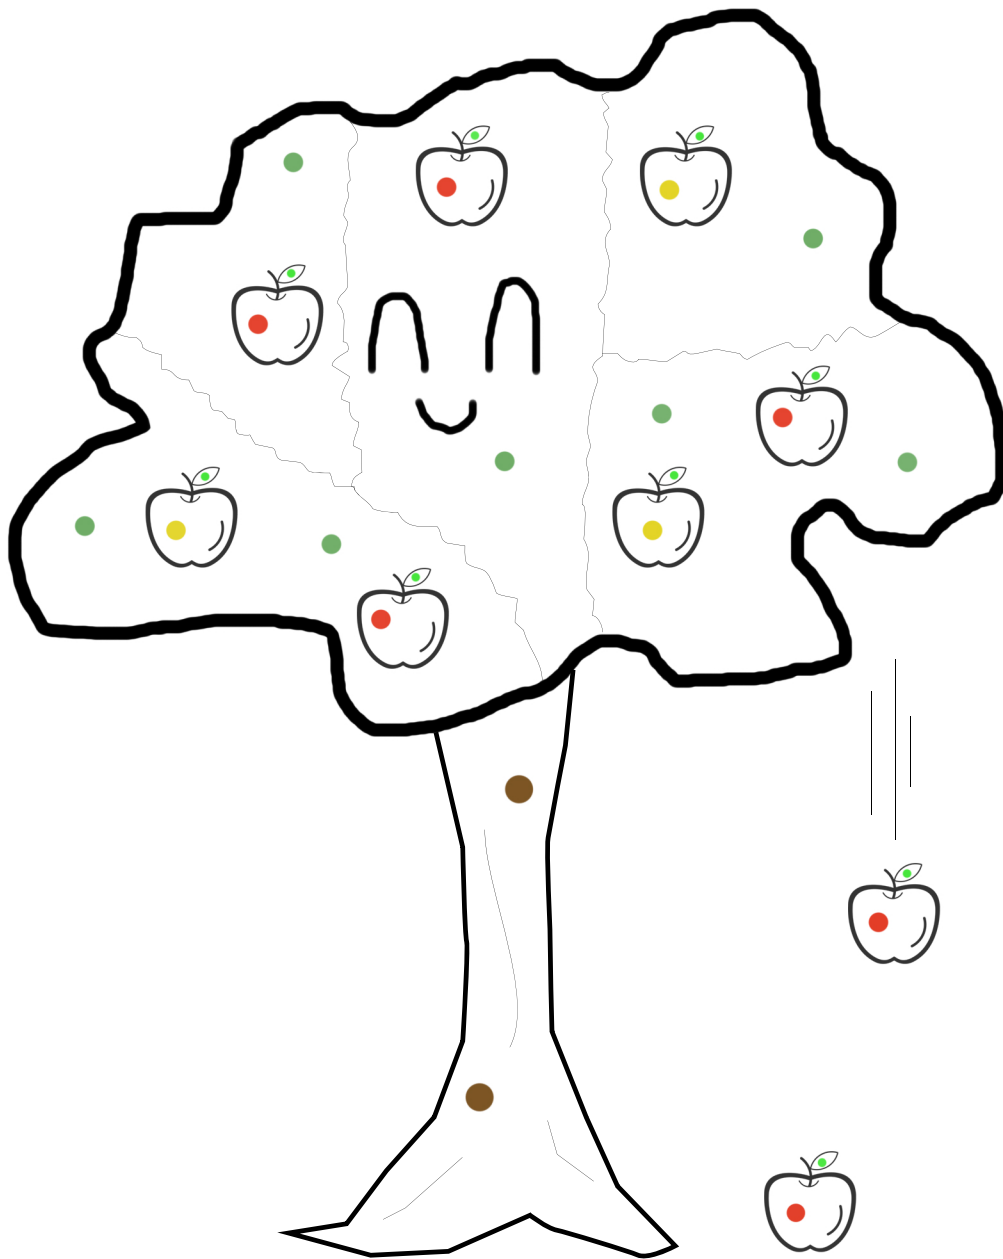

Picture a pendulum as a really chill friend who loves to swing back and forth like they're dancing at a party! It's like having a tiny acrobat hanging from a string, just swaying and swinging all day long.

When you give a pendulum a push, it's like inviting it to a dance - it starts swinging back and forth, showing off its smooth moves.

It's like the ultimate pendulum party trick! So, next time you see a pendulum, just imagine it busting out its best dance moves, swinging to the beat of its own rhythm

Finish coloring the tree and apples :)

Gravity is like the ultimate apple snatcher—it's the reason why when you drop your apple, it's not going to float away like a balloon!

It's like the Earth's way of saying, 'Come here, delicious apple, I've got you!'
